Write an app store employee details in a core data table. There will be two screens in the app:
1. First screen is to enter employeeID,First name, last name and salary
2. Second screen is to display all the employees entered so far.
3. Second screen also has a button "max" which displays the name of the employeeID and name of the employee with the maximum salary.

Second part:
4. Add a button to the second screen to sort the list of employees by salary in descending order. The sorted list should be shown in the same screen and not in a popup.
